* Horsepower is the peak output power of a motor, measured with a dynamometer, a machine laboratories routinely use to measure the mechanical power of motors. Wattage is the average electricity consumption of an electrical appliance over a period of time. Therefore, wattage measures the energy consumption of an appliance, but does not reflect its motor power. KitchenAid 6.9 L ARTISAN Stand Mixer has a 1.3 horsepower motor, and an electricity consumption declaration of 500 Watts. This robust motor, guided by its new advanced motor control board and combined with the all-metal, high precision gear assembly allows for a maximum transmission of power to the attachment, offering an exceptional mixing power in the bowl. Simply put, our new, highly efficient, special purpose motor delivers the power you need when you need it.
